DETAILED ACTION

This communication is in response to applicant's amendment filed May 30, 2006.
 Claims 1-26 are currently pending in this case.

Response to Arguments

2. Applicant's arguments with respect to claims 1-26 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stefik et al (US 5,629,980).
- 5. Regarding claim 1 –

Stefik discloses a data file distribution and processing system (e.g. ab, col 3 In 50-52) including server software running on a source computer for sending data files to a destination computer via a network link between the source computer and the destination computer, and including processing software running on the destination computer for processing each data file forwarded thereto from said server software to carry out an action, a method for preventing the processing software running on the destination computer from processing data files forwarded to the destination computer other than from the server software, the method comprising the steps of:

Application/Control Number: 09/754,927

Art Unit: 3621

including within the server software running on the source computer license stamping means for embedding a license stamp into each data file before the server software forwards the data file to said destination computer via said network link (e.g. col 14 In 62- col 15 In7); and

adapting said processing software executed by said destination computer so that it processes each received data file to carry out said action only when the received data file contains the embedded license stamp, wherein the license stamp embedded in the data file indicates that the data file was forwarded by licensed server software (e.g. col 15 6-7).

- 6. Stefik does not use precisely the same terminology as the instant application, e.g., "ticket" in Stefik, rather than "stamp" in the instant application. Mere renaming, however, does not confer patentability.
- 7. Regarding claims 2-11 –

Stefik discloses the method in accordance with claim 1 wherein said encoded license stamp comprises a code identifying said source computer (e.g. col 13 ln 24-40); wherein said each data file, including its embedded license stamp, is a print file defining a document in a format suitable for directly causing a printer to print said document (e.g. col 4 ln 29-36); wherein said license stamping means embeds said encoded license stamp into the each data file in such a way that said printer ignores the encoded license stamp when printing said document in response to said data file (e.g. col 48 ln 20-26); wherein said action carried out by said processing software comprises displaying on a computer monitor a representation of the document defined by the data file (e.g. col 4 ln

32); wherein said action carried out by said processing software comprises causing said printer to print said document (e.g. col 4 ln 32); wherein solid data file defines a sound and wherein said action carried out by said processing software comprises a initiating said sound (e.g. col 4 ln 32-33); wherein said data file defines a video image and wherein the action carried out by said processing software comprises initiating a display of said video image (e.g. col 3 In 50-55); wherein said license stamping means also processes each said data file to determine a value of an attribute of the data file and includes in said embedded license stamp an attribute code indicating said value of said attribute, and wherein the method further comprises the step of adapting the processing software to process each received data file to determine a value of said attribute of each data file received, and to refrain from processing the received data file to carry out said action unless the received data file includes an embedded license stamp containing said attribute code indicating a value of said attribute patching the value of said attribute determined by said processing software (e.g. table 2); wherein the data file processed by said license stamping means consists of a plurality of data bytes, each of which influences the value of said attribute determined by said license stamping means (e.g. table 2); and wherein said license stamping means includes a processing option code within said license stamp embedded within said data file, and wherein the option code influences the nature of the output the processing software produces when processing the data file (e.g. table 2).

Application/Control Number: 09/754,927 Page 5

Art Unit: 3621

8. As above, Stefik does not use precisely the same terminology as the instant application, e.g., "ticket" in Stefik, rather than "stamp" in the instant application. Mere renaming, however, does not confer patentability.

9. Regarding claim 12-26 -

Clams 12-26 are rejected under the same criteria as above.

10. Examiner's note: Examiner has cited particular columns and line numbers in the references as applied to the claims above for the convenience of the applicant.

Although the specified citations are representative of the teachings in the art and are applied to the specific limitations within the individual claim, other passages and figures may be applied as well. It is respectfully requested from the applicant, in preparing the responses, to fully consider the references in entirety as potentially teaching all or part of the claimed invention as well as the context of the passage as taught by the prior art or disclosed by the examiner.

Conclusion

- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cristina Owen Sherr whose telephone number is 571-272-6711. The examiner can normally be reached on 8:30-5:00 Monday through Friday.
- 12. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew J. Fischer can be reached on 571-272-6779. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Page 6

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
